

RENDX

PRIMER

Description and use

RendX primer improves the performance of render-based plasters when applied to damp or salt contaminated walls.

Where to use RendX Primer

RendX Primer should be applied to the wall before applying render-based plasters.

Instruction for use

Apply RendX Primer to the wall up to 12 hours before applying render.

Carry out a second application of RendX Primer approximately 30 minutes before applying render.

Apply by brush or hand sprayer.

RendX Primer is ready to use – do not dilute.

Covers approximately 15m²

Safety information

Wear suitable protective clothing including waterproof gloves, eye and face protection. Do not breathe fumes. In case of contact with eyes, rinse with water. Medical attention should be sought in the case of accidents or if you feel unwell following use of this product.
